

# **DISTRICT LEVEL INDICATORS OF NEPAL**

**for**

**Monitoring Overall Development**

**(Based on Selected Socio-Economic Indicators)**

**His Majesty's Government  
National Planning Commission Secretariat  
Central Bureau of Statistics  
Ramshah Path, Thapathali  
Kathmandu, Nepal  
2003**

## **PREFACE**

As per the kind encouragement from Honorable Vice-Chairman of National Planning Commission, Dr. Shankar Prasad Sharma to prepare a district level modeling on development indicators, this book has been published in the form of an occasional publication of CBS. For this, we would like to acknowledge Honorable Vice-Chairman for his guideline and encouragement to us.

In this book, different types of socio-economic indicators that have the direct relationship with development have been analyzed and presented by national as well as district level. Moreover, based on the values of these indicators, districts have been ranked by using Composite Indices. Based on the values of the indicators, the 75 districts of Nepal have been classified into three groups as Group A, Group B and Group C; so that each group consists of 25 districts. As per the development level shown by indicator values, the better first 25 districts are presented in Group A, then the middle 25 districts in Group B and the last 25 districts in Group C.

In this book, 28 indicators have been presented representing from different sectors such as health, education, agriculture, employment, demography, access to facilities and others. These indicators were used to rank all 75 districts of Nepal as per development level. For this, the Overall Composite Index is used. Definitely, there is no fixed set of indicators to judge the overall development level of an area. In this regard, indicators presented in this book are also selective which we thought reliable for this study. Of course there are some other indicators that could be incorporated in this study, however, due to the unavailability of such updated information at the time of preparation of this report, we could not incorporate it. Attempts will be made to incorporate such issues in future publication of this kind.

I would like to express my sincere thanks to the Deputy Director Mr. Nebin Lal Shrestha, for his dedicated, untired and efficient work in preparing these indicators and analysis in a short period of time. I am also thankful to the Deputy Director General Mr. Rabi Singh, Former Director General of CBS Mr. Keshav Raj Sharma, Deputy Directors: Mr. Krishna Prasad Shrestha, Mr. Radha Krishna GC and Mr. Rabi Prasad Kayastha for their valuable inputs in publication of this issue. Similarly, my acknowledgment goes to the Statistical Officers: Mr. Suresh Basnyat & Mr. Mahesh Kumar Chalise, Economist Mr. Kedar Basnet, Section Officer Mrs. Rita Shrestha and all other staffs working in Social Statistics Section for their support in this work. We believe that this publication will be helpful to the planners, policy makers and researchers who are interested in district level development study. The Bureau expects to have suggestions and comments from readers for further improvement in the future publication of this kind.

**T.S. Bastola**

## LIST OF INDICATORS

<b><u>SN</u></b>	<b><u>Indicators</u></b>	<b><u>Page No.</u></b>
1	Overall Composite Index .....	3
2	Access to improved source of drinking water .....	4
3	Access to toilet facility .....	5
4	Proportion of households having electricity facility .....	6
5	Proportion of households using solid fuels for cooking .....	7
6	Proportion of households having radio facility .....	8
7	Telephone lines per thousand population .....	9
8	Road density (length/sq.km. Area) .....	10
9	Singulated mean age at marriage female .....	11
10	Child dependency ratio .....	12
11	Incidence of ARI per 1000 children < 5 years .....	13
12	Incidence of diarrhea per 1000 children < 5 years .....	14
13	Proportion of malnourished children under 3 years .....	15
14	Reported death per 1,000 population .....	16
15	Primary school net enrolment ratio .....	17
16	Ratio of girls to boys in primary education .....	18
17	Student teacher ratio in secondary education .....	19
18	Literacy rate of population 15-24 years .....	20
19	Ratio of literate female to literate male 15-24 years .....	21
20	Share of women in wage employment in non-agriculture sector .....	22
21	Employment to population of working age ratio .....	23
22	Proportion of children 10-14 who are working .....	24
23	Proportion of urban population .....	25
24	Yield of vegetables .....	26
25	Yield of fruits .....	27
26	Yield of cash crops .....	28
27	Yield of fisheries .....	29
28	Yield of cereal crops .....	30
29	Yield of pulses .....	31

## **Methodology**

For the purpose of ranking districts by development indicators, a well-known technique named Composite Index is used. This index transforms all indicators into 0 to 1, which are free from the unit of measurement. Use of this process outlines the smallest value of the indicator to 0 and the largest value to 1 and all other values between 0 and 1. The smallest value 0 represents worst condition of development and the largest value 1 represents excellent condition of development. This transformation is often called Zero-to-One Scoring Transformation. The computation formula for this transformation is as follow:

Let,  $x_{ij}$  denote the value of the  $j^{\text{th}}$  indicator in  $i^{\text{th}}$  district

$\max_j$  and  $\min_j$  denote the corresponding maximum and minimum values of the  $j^{\text{th}}$  indicator in all 75 districts

then the Composite Index for the  $j^{\text{th}}$  indicator in the  $i^{\text{th}}$  district, say  $C_{ij}$  is computed by using following expression:

$$C_{ij} = \frac{x_{ij} - \min_j}{\max_j - \min_j} \quad \text{When high value is good, for example, literacy rate}$$

$$C_{ij} = \frac{\max_j - x_{ij}}{\max_j - \min_j} \quad \text{When low value is good, for example, proportion of household using solid fuel for cooking}$$

Once all indicators are transformed into Composite Indices, the Overall Composite Index (OCI) is computed for the ranking of the districts based on the available indicators. Since, a district identified as worst by one indicator may not necessarily identify as worst by another indicator; hence, it is required to compute OCI for each district. The OCI is calculated again by using the formula,

$$OCI_i = \frac{\bar{\mu}_i - \min \bar{\mu}}{\max \bar{\mu} - \min \bar{\mu}}$$

Where,  $OCI_i$  is the Overall Composite Index for the  $i^{\text{th}}$  district

$\bar{\mu}_i$  represent average value of the composite indices belonging to the  $i^{\text{th}}$  district, and

$\max \bar{\mu}$  and  $\min \bar{\mu}$  denote the corresponding maximum and minimum values of the average value of the composite indices in all 75 districts.

### **List of Indicators Used for Aggregation of Indicators**

SN	Indicators	SN	Indicators
1	Access to improved source of drinking water	15	Ratio of girls to boys in primary education
2	Access to toilet facility	16	Student teacher ratio in secondary education
3	Proportion of households having electricity facility	17	Literacy rate of population 15-24 years
4	Proportion of households using solid fuels for cooking	18	Ratio of literate female to literate male 15-24 years
5	Proportion of households having radio facility	19	Share of women in wage employment in non-agriculture sector
6	Telephone lines per thousand population	20	Employment to population of working age ratio
7	Road density (length/sq.km. Area)	21	Proportion of children 10-14 who are working
8	Singulated mean age at marriage female	22	Proportion of urban population
9	Child dependency ratio	23	Yield of vegetables
10	Incidence of ARI per 1000 children < 5 years	24	Yield of fruits
11	Incidence of diarrhea per 1000 children < 5 years	25	Yield of cash crops
12	Proportion of malnourished children under 3 years	26	Yield of fisheries
13	Reported death per 1,000 population	27	Yield of cereal crops
14	Primary school net enrolment ratio	28	Yield of pulses

**Definition:** Access to toilet facility refers to the households having their own toilets that could be within the house or boundary of the house. If the households do not have their own toilet and household members use either public toilets or open places for defecation then such households are considered as households having no toilet facilities.

This indicator is computed as the ratio of the number of households having toilet facility to the total households as a percentage.

**Reference Year:** 2001

**Source:** Population Census 2001, CBS

**Proportion of households having electricity facility**

**Definition:** Population of working age covers people ages 15-59 years. Employment refers to people who are employed in an economic activity for pay, profit or family gain. Economic activity covers all production of goods and services for pay or profit or for use by own household. This indicator is the ratio of employed people ages 15-59 years to the total number of people of the same age group.

**Reference Year:** 2001

**Source:** Population Census 2001, CBS

**Proportion of children 10-14 who are working**

**Definition:** Proportion of children 10-14 who are working refers to children who are employed in an economic activity for pay, profit or family gain. Economic activity covers all production of goods and services for pay or profit or for use by own household. This indicator is the ratio of employed children 10-14 years to the total number of children of the same age group.

**Reference Year:** 2001

**Source:** Population Census 2001, CBS

**Proportion of urban population**
